Passion for Road Safety

Directional signage

Safety signage

Informational signage

Identification signage

OUR COMPANY

Prealux was founded over 35 years ago and has been active in the field of vertical, horizontal signage and road safety. Our company is particularly active in the railway sector after taking over the business unit of the company Tecniche Nilo S.r.l. for the installation and marketing of signage and equipment. The experience we gained allowed us to create avant-garde products for the railway sector and to become a leader company in Italy. Our research and development department can design and produce different types of specific products in order to meet the widest possible range of needs including the High Speed/ High Capacity industry. Our goals are:

- providing greater efficiency and readability of signs and messages;
- recognition and consistency of signs and dedicated services.

The correct signaling system of a modern railway station becomes the multiplier of the actual functionality and comfort that it provides to its users. The recipients of information and messages in railway stations are not only travelers, but also those who increasingly work there or make use of their services and commercial spaces. We cooperate with railway groups to solve problems, study, design and install a new station or upgrade an existing structure. We modify or create new signage solutions according to the issued guidelines. Our internal manufacturing department can meet any demands of reflective, non-reflective, luminous and luminescent railway signage.
